YachtPorter Specifications:

- Smart Furniture to replace outdated sharing methods.
- Upgrading Guest Experience.
- Fast & efficient connection to Guest Wi-Fi.
- Secure credential storage.
- Remote management & password updates.
- No Power or Batteries Required.

YachtPorter simplifies the process of sharing Wi-Fi with your guests. With just an Android or iOS device, you can set it up in minutes. When your guest taps the device or scans the QR code, the network password seamlessly appears on their phone. This eliminates the need for your guests to manually type in the password or multiple guests asking the crew, making the process much easier. Additionally, you have the flexibility to create a complex and secure password without worrying about the hassle of trying to share it.

YachtPorter also offers the option of custom branding for your guests, such as displaying your vessel name on the Physical Device, but also on the splash screen the guests are presented with. You can remotely manage the Wi-Fi network information and passwords from anywhere, which allows for easy updates and modifications.
With YachtPorter, you can provide contactless Wi-Fi sharing that eliminates the need for physical paper distribution. This feature is especially useful in today's world, as the device can be easily cleaned and sterilized.

When the devices are remotely managed, the Wi-Fi credential data is stored on our secure server using Bcrypt technology. Bcrypt uses a 128-bit salt and encrypts a 192-bit magic value to protect the data. This security architecture provides assurances that only guests with physical access to a YachtPorter are able to connect.
